GEOGRAPHY

NINTH PAPER

(Geomorphology)

(Revised)

Full Marks : 75

Time : 3 hours

The figures in the margin indicate full marks for the questions.

(SECTION : A—OBJECTIVE)

(*Marks* : 10)

Tick (✓) the correct answer in the brackets provided : 1×10=10

1. Geomorphology is an important branch of

(a) human geography ( )

(b) biogeography ( )

(c) physical geography ( )

(d) environmental geography ( )

2. Endogenetic forces are those that originate

(a) outside the earth's crust ( )

(b) within the earth's crust ( )

(c) both within and outside the earth's crust ( )

(d) None of the above ( )

3. The old stage of landforms is characterized by

(a) high relief and active erosion ( )

(b) low relief and active erosion ( )

(c) low relief and little or no erosion ( )

(d) high relief and deposition ( )

4. Interruption of the cycle of erosion denotes
   (a) process of erosion ( )
   (b) erosion of a stable landmass ( )
   (c) mature stage ( )
   (d) rejuvenation ( )

5. When there is balance between velocity and sediment load to be transported downstream, the course of a river is said to be
   (a) valley thalweg ( )
   (b) penultimate stage ( )
   (c) graded curve ( )
   (d) channel gradient ( )

6. The total length of the channel in a drainage basin divided by the total area of the basin is known as
   (a) drainage density ( )
   (b) perimeter of drainage basin ( )
   (c) drainage frequency ( )
   (d) None of the above ( )

7. A horst is formed through
   (a) down-faulting of rocks between two fault planes ( )
   (b) lateral shift of rocks along a single thrust plane ( )
   (c) compression of rocks between two converging landmasses ( )
   (d) uplift of rocks between fault planes ( )

8. The first stream to be originated in a particular region is called
   (a) resequent stream ( )
   (b) subsequent stream ( )
   (c) obsequent stream ( )
   (d) consequent stream ( )

9. Which of the following are considered the most powerful agent of marine erosion?
   (a) Tides ( )
   (b) Waves ( )
   (c) Wind ( )
   (d) Currents ( )

10. The process of mechanical breaking down of transported rock fragments due to impact among themselves is called

(a) attrition ( )

(b) abrasion ( )

(c) hydraulic action ( )

(d) cavitation ( )

(SECTION : B—SHORT ANSWERS)

(*Marks* : 15)

Write short notes on/Answer the following : 3×5=15

UNIT—I

1. Process of deposition

Or

2. Mass wasting

UNIT—II

3. Normal Cycle of Erosion

Or

4. Exogenetic forces

UNIT—III

5. What do you mean by graded river?

Or

6. Define 'longitudinal profile of a stream'.

UNIT—IV

7. Faults

Or

8. What do you understand by denudation chronology?

UNIT—V

9. Mushroom rocks

Or

10. Formation of ocean beaches

(SECTION : C—DESCRIPTIVE)

(*Marks* : 50)

Answer the following : 10×5=50

UNIT—I

1. Describe in brief the fundamental concepts of geomorphology. 10

Or

2. What is weathering? Explain the different types of weathering. 2+8=10

UNIT—II

3. Examine the Davisian model of geographical cycle with suitable diagram. 10

Or

4. Define slope. Discuss various types of slope segments. 2+8=10

UNIT—III

5. Define morphometry. Discuss different aspects for the analysis of basin morphometry. 2+8=10

Or

6. What is channel morphology? Describe the various factors affecting channel morphology. 2+8=10

UNIT—IV

7. Discuss the types and patterns of drainage systems with suitable diagrams. 7+3=10

Or

8. What is folding? Describe the different types of folds with suitable diagrams. 2+8=10

UNIT—V

9. What do you mean by Karst topography? Describe the significant landforms developed in Karst region. 2+8=10

Or

10. Describe the significant landform features formed in the arid region due to wind erosion. 10

★★★
