2026

(NEP—2020)

(4th Semester)

GEOGRAPHY (MAJOR)

(Geomorphology)

Full Marks : 75

Time : 3 hours

The figures in the margin indicate full marks for the questions.

(SECTION : A—OBJECTIVE)

(*Marks* : 10)

Tick (✓) the correct answer in the brackets provided : 1×10=10

1. Geomorphology is

(a) the study of atmospheric phenomena ( )

(b) the study of landforms, their origin and evolution ( )

(c) the study of oceanic circulation ( )

(d) the study of human-environment interaction ( )

2. Exogenetic geomorphic processes are influenced mostly by

(a) vegetation ( )

(b) climate ( )

(c) slope ( )

(d) None of the above ( )

3. The disintegration or decomposition of rock in place is called

(a) weathering ( )

(b) mass wasting ( )

(c) chelation ( )

(d) weathered debris ( )

4. What is/are the primary factor/factors contributing to mass wasting?

(a) Tectonic activity ( )

(b) Weathering and erosion ( )

(c) Gravity ( )

(d) Human activities ( )

5. The end product of Davis cycle of erosion is

(a) endrumpf ( )

(b) pediplain ( )

(c) panplain ( )

(d) peneplain ( )

6. Sinkholes are landform features associated with

(a) coastal topography ( )

(b) fluvial landscape ( )

(c) glaciated land ( )

(d) karst topography ( )

7. The process of mechanical breaking down of transported rock fragments due to impact among themselves is called

(a) attrition ( )

(b) abrasion ( )

(c) hydraulic action ( )

(d) cavitation ( )

8. Waterfall is a characteristic landform feature of the

(a) middle course of a river ( )

(b) lower course of a river ( )

(c) upper course of a river ( )

(d) None of the above ( )

9. Which of the following is the slowest type of mass wasting?

(a) Slump ( )

(b) Rockfall ( )

(c) Creep ( )

(d) Debris flow ( )

10. According to Davis, what is the final stage in the cycle of erosion?

(a) Peneplain ( )

(b) Youthful stage ( )

(c) Mature stage ( )

(d) Old age ( )

(SECTION : B—SHORT ANSWERS)

(*Marks* : 15)

Write short notes on *five*, selecting at least *one* from each Unit : 3×5=15

UNIT—I

1. Concept of Uniformitarianism

2. Modern trends in geomorphology

UNIT—II

3. Normal cycle of erosion

4. Rapid flowage type of mass wasting

UNIT—III

5. Stalactite and Stalagmite

6. Aeolian landform

UNIT—IV

7. Rectilinear slope

8. Endrumpf

(SECTION : C—DESCRIPTIVE)

(*Marks* : 50)

Answer *five* questions, selecting at least *one* from each Unit : 10×5=50

UNIT—I

1. Describe the nature and scope of geomorphology.

2. Discuss the fundamental concepts in the study of geomorphology.

UNIT—II

3. What is weathering? Mention the different types of weathering processes.

4. Explain, in detail, the theory of landscape evolution as proposed by W. M. Davis.

UNIT—III

5. What are the various landforms that are typically associated with fluvial processes?

6. Describe the various features that are formed in glaciated landforms.

UNIT—IV

7. Discuss, in detail, Walther Penck's Slope Replacement Model.

8. Discuss the major differences between Down-wasting and Slope replacement models of hillslope evolution.

★★★
